

## Dry Verge System BS8612:2018 Compliance

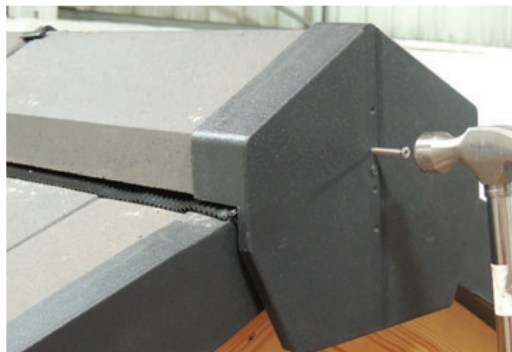

We have carried out enhancements to our dry verge units and stop ends to assist the ease of installation.

To ensure compliance with BS8612:2018, we have developed a specific Stainless Steel dry verge system Screwnail with a TX20 countersunk head to securely fix the units.

The Stop Ends now have had two additional fixing holes incorporated to aid their fixing when used in a range of eave situations.

The Drive Screws can be fixed traditionally using a hammer for End Stops, Dry Verge units and Ridge End Caps. They can be unscrewed using a TX20 bit if required.

Item no. 1200000330  
Item Description: Dry Verge System Screwnail  
These are available in bags of 100 No or 2,500 No in 25 bags (boxed)
